

# Doubled Bandwidth and Redundancy at Two-Thirds the Cost

*How a financial services firm modernized its network and cut costs simultaneously*

## The Story

In the world of financial services, downtime is not an option. A growing expanding financial services firm approached Prelude with concerns about aging MPLS infrastructure. It was costly, underperforming, and vulnerable to a single point of failure.

The client needed more bandwidth, greater resilience, and lower costs, all in one project.

### → Optimizing Technology

Prelude quickly assessed the outdated MPLS setup and guided the seamless transition to a modern software-defined network aggregation model, delivering a faster, more resilient, future-ready network.

### → Why It Mattered

For a business where every second of uptime protects client trust and revenue, this upgrade delivered peace of mind and a stronger competitive edge. The new network not only met their performance goals but also freed up budget for other strategic initiatives, turning a technology challenge into a long-term advantage.

### → The Outcome

- Two diverse, active/active carrier connections
- A dramatic boost in bandwidth
- Significantly improved network redundancy and uptime
- All while reducing their monthly costs 33%.
